

PERCEPTION, ACTION, COGNITION &

WEEK 9

EMOTIONS

Sensation → transformation of external events → neural activity
Perception → processing of sensations

David Marr

How does sound become electricity?

Vision

hair cells - sounds come and they move -

they open/close this mechanosensitive ion channels.

↓

current

↓

depolarization.

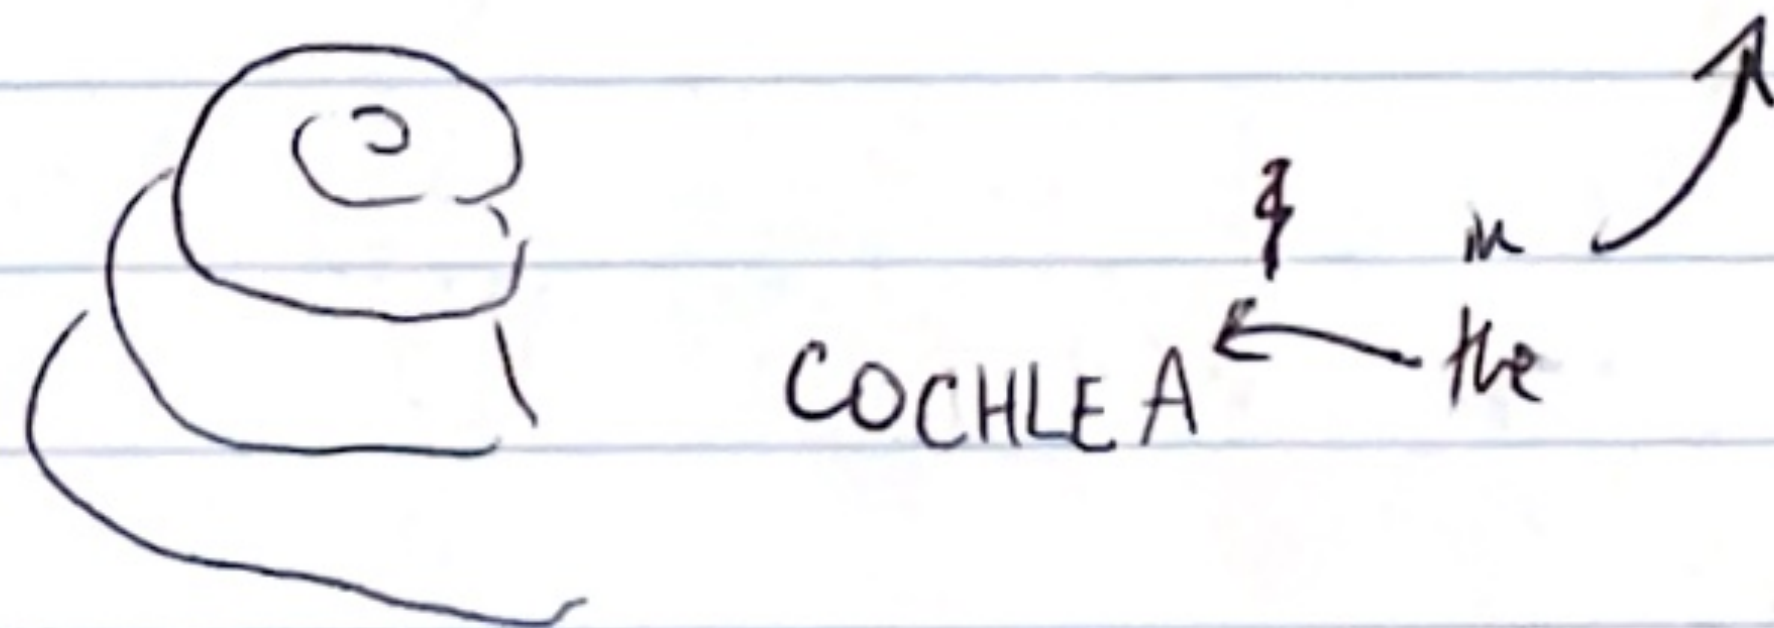

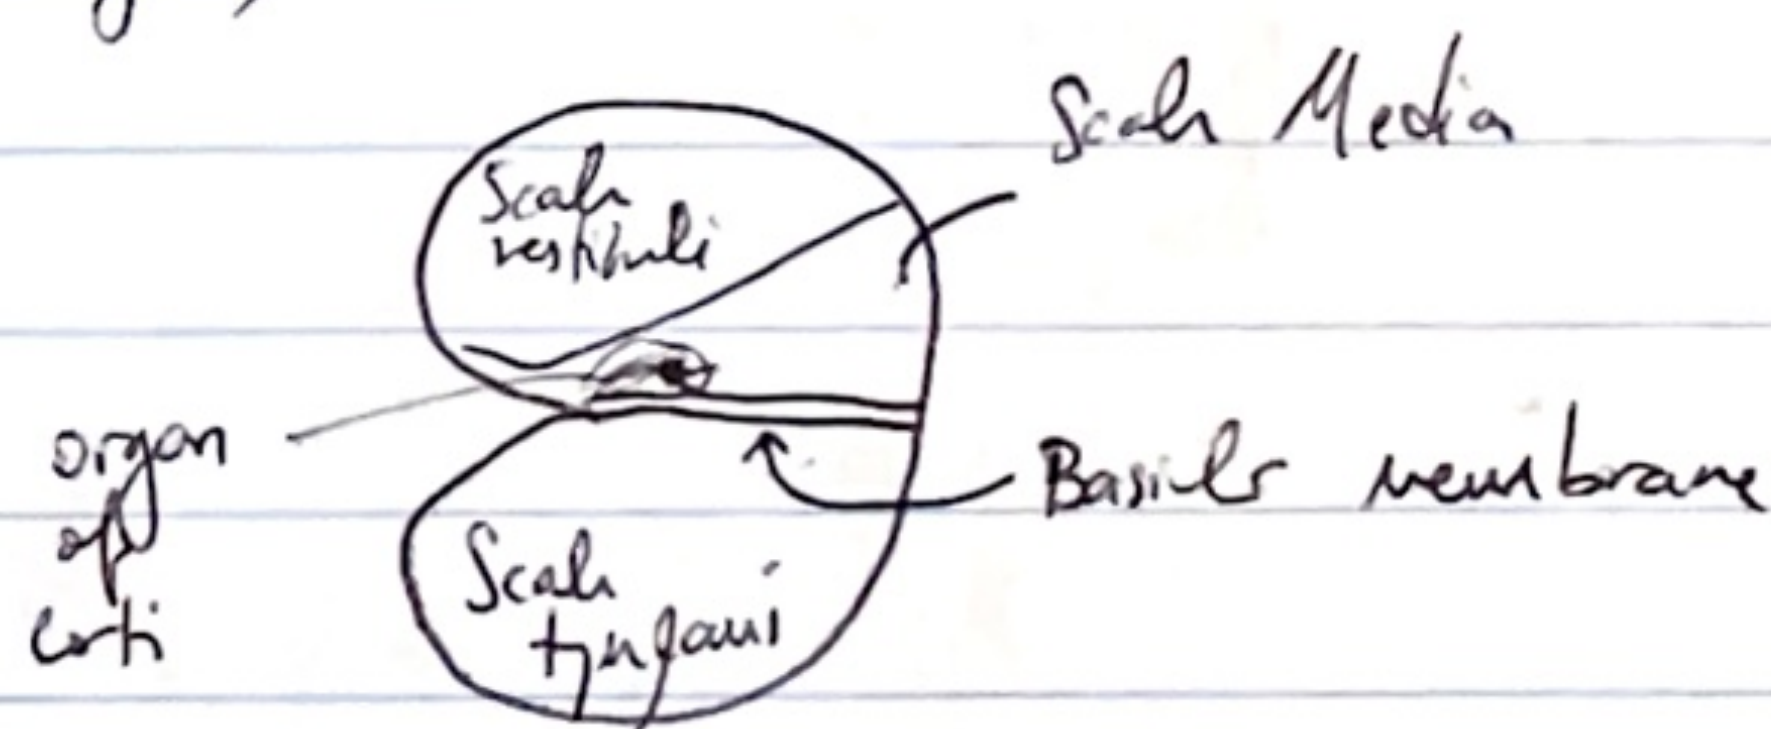

hair cells sit on the basilar membrane which moves in response to sounds.

|

organ of Corti

embedded in an organ very stiff (~~Corti organ~~)

(motion) Basilar membrane → hair bundle
↓
sits in a tube

vibration in the air → vibration in the tympanum → transferred to the fluid of the cochlea

Helmholtz → basilar membrane changes from inside to outside

(3 bones)
pressure waves on the basilar membrane

OPIDO

Born Owl. Experiment → Owl shifts the visual angle with the green and the audition follows.

pseudo
color
lover.

The neurons in the visual got tell the auditory one to shift → they generate new axons.

Higher Process of Sensory Information.

Risto Naatanen

Unexpected events cause an early negativity

EMOTIONS

~~Love~~
~~Amor~~
~~Org information~~
